FAQ (Frequently asked questions) about blood donation

01 How often you can donate blood ?

A: A three month gap between donations is considered safe.

02 How much blood is collected per donation?

A: An average adult has about 4-5 liters of blood of which only 350 to 450 ml. of blood is collected during one donation.

03 Who gets the blood that I donate?

A: Generally patients in hospitals in the vicinity of blood bank benefit from your donation. They include: pregnant mothers, cancer patients, hemophiliacs, and accident victims, people undergoing various surgeries or transplants and especially thalassaemia patients, who need regular monthly blood transfusion throughout their life.

04 Do I need to carry anything with me for blood donation?

A: Carry some identification and a contact number, though it is not mandatory for donation, but it helps the blood bank to update their records and contact you if needed. Carry relevant medical records like the list of medications that you are currently taking or latest blood reports, if any.

05 How long does it take to give blood ?

A: The procedure is done by skilled, specially trained personnel and takes three to eight minutes. However, from start to finish-filling form, post donation rest etc; the entire process may take around 30 minutes.
